

March 10, 2015

Patient Name: Johnathan Smith

D.O.B: 12th March 1965

NHS Number: 123 456 7890

Consultation Summary

Date of Appointment: 10th March 2016

Consultant: Dr. James Patel

Location: St. Mary's Hospital, Neurology Clinic

Reason for Referral: Seizure control concerns

Notes: Mr. Smith presented with an increase in seizure frequency over the past 12 months. Carbamazepine, which he had been taking for 1.5 years, was no longer sufficient in controlling his seizures. Consequently, the decision was made to switch to sodium valproate. Unfortunately, Mr. Smith developed nausea with sodium valproate, leading to a further change in medication.

Plan: Discontinue sodium valproate. Start Levetiracetam and monitor for side effects. Follow-up in 3 months.
